NIKOLA IRAKOSKI

Bitola, Macedonia • (+389) 72 260 485 • nikola.irakoski99@gmail.com • LinkedIn ⇗

Professional Summary

A dedicated professional with 4+ years of work experience in full-stack development roles. This journey has cultivated expertise in various programming languages and technologies. Proficiency spans both front-end and back-end development, showcasing adaptability to different technologies. Strongly committed to continuous learning and innovation through concurrent involvement in side projects. These projects serve as a testament to the ability to explore emerging technologies and remain updated on industry trends.

WORK EXPERIENCE

**Full Stack Developer, Inellipse**   **Sep 2021 - Present**

- **Front-End Skills:** Proficient in React.js, Angular 2, JavaScript and TypeScript to create user-friendly, responsive interfaces with rich features that align with project requirements.
- **Back-End Proficiency:** Expertise in Node.js and Java Spring Boot for architecting and implementing robust server-side solutions, including microservices, RESTful API design, and database modeling.
- **Data Handling:** Experienced in PostgreSQL, and MongoDB for data storage and management. This includes authentication, and efficient database queries for improved app responsiveness and security.
- **Team Collaboration:** Actively engaging in cross-functional project teams, collaborating closely with designers, front-end/back-end developers, and stakeholders, effectively communicating technical concepts for project success.
- **Leadership:** Led a team of 3 developers and coordinated tasks in an agile environment. Mentored 6 interns, assisted with their tasks, and delivered educational presentations on core concepts.
- **Agile Development:** Embracing Agile methodologies, participating in sprint planning, daily stand-ups, and retrospectives for iterative development and continuous improvement. Ensuring codebase integrity and reliability through version control.

Web Developer, Bintern ⇗   **Feb 2021 - Sep 2022**

Built responsive and interactive front-end interfaces with Nuxt.js, integrating Firebase for real-time data, authentication, and Firestore database management.

Led a team of developers to make a market-ready interactive mobile text-based game. Leveraged the power of AI throughout the project, using advanced tools for coding, idea generation, and design to bring the game to life.

Jobathon, Skopje   **Jun 2021**

Creating software for determining whether one blog has positive or negative content.

Opendata, Skopje   **Feb 2021**

Created software for data filtering and displaying data charts.
